

CLEVER Cities

London

Milan September 2019

London's population is projected to increase by 70,000 every year, reaching 10.5 million by 2041. According to the Mayor's London Plan, this means 66,000 new homes need to be built every single year. The housing crisis is the single biggest barrier to prosperity, growth and fairness facing Londoners today.

By around 2050, London aims to be a carbon-free and zero waste city, and it will be a far better place to live. Nature will be at the heart of life as the capital is declared the world's first National Park City, with more than half of its footprint given over to green space.

London Plan

A city spatial planning framework

To ensure that London's growth is Good Growth, each of the policy areas in this Plan is informed by the six Good Growth policies:

- Building strong and inclusive communities
- Making the best use of land
- Creating a healthy city
- Delivering the homes Londoners need
- Growing a good economy
- Increasing efficiency and resilience

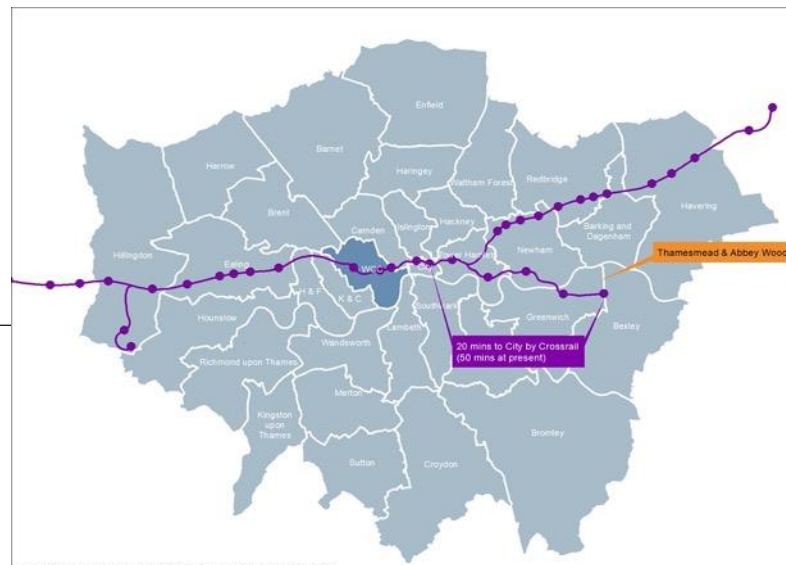

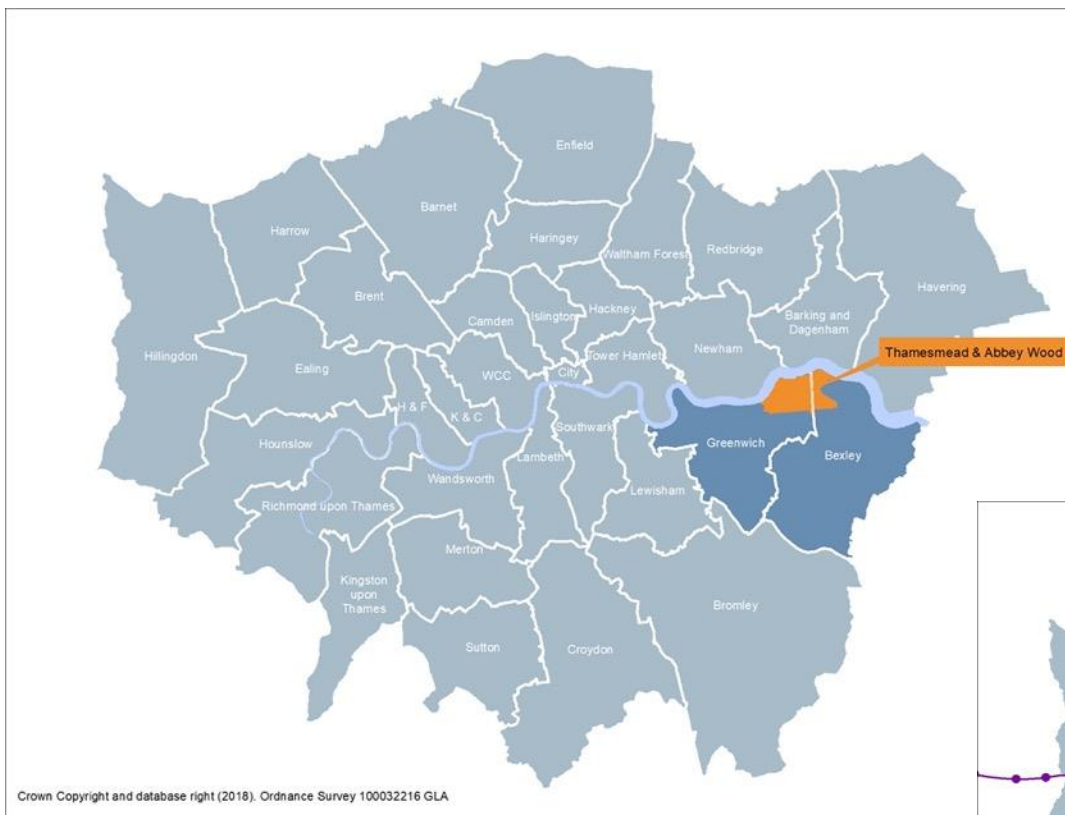

We want to demonstrate that greener cities work better for people and communities!

Thamesmead – Opportunity Area

Thamesmead is changing – fast. Expected to double in size over the next thirty years, it is set to experience growth on a scale not seen since its development half a century ago. This surge needs to be met with a response that is powerful, imaginative and effective.
